

DFII IONZYME FACIAL

GET THE FACTS

WHAT IS IT?

The Ionzyne DFII machine is an advanced facial machine which provides treatments that are at the forefront of scientific skin care.

The machine introduces the use of active Sonophoresis (sound waves) and intensified Iontophoresis (pulsed electrical current) to deeply infuse vitamin A, C and antioxidants into the skin, and is possibly the most advanced penetrant enhancing machine available in the world today.

This creative system enhances the penetration of these products through the skin providing up to 4000% better penetration of the active vitamins and essential factors into the skin. This technique is crucial because skin has a natural, waterproof barrier that hinders the penetrations of vitamins.

WHAT WILL IT DO FOR YOUR SKIN?

- Stimulates maximum thickening of the skin for a healthy looking complexion
- Normalises and improves the quality of collagen and elastin
- Allows better control of pigmentation problems and distribution
- Restores normal blood flow
- Helps to oxygenate your skin
- Intensifies peeling treatments

WHAT WILL IT HELP TO TREAT?

- Fine lines and wrinkles
- Sun damaged skin
- Deeper frown and lip lines
- Acne and chickenpox scars
- Pigmentation problems
- Stretch marks
- Active acne and congestion

WHAT IS THE TREATMENT LIKE?

There are some sensory effects you may experience during your treatment such as a slight flashing behind your eyes, some tingling on your skin as the pulsed Iontophoresis. Sonophoresis produces a whistling sound when active on your skin. Your Boheme therapist will work within your comfort levels.

WHEN ARE RESULTS NOTICED?

Your skin will feel healthier, plumped and smooth after your first treatment, however a course of treatments is recommended to address specific problems such as localised lines and wrinkles and pigmentation. Your Boheme therapist will recommend an individualised program for you if necessary.

CAN THE DFII BE COMBINED WITH OTHER TREATMENTS?

Yes. DFII infusions are intensified when combined with skin peels, dermal rolling and microdermabrasion. Ask your Boheme therapist for the best combination to treat your skin worries.

HOW LONG DOES THE TREATMENT TAKE?

Each treatment is different as the DFII is incorporated into a facial. The actual use of the machine can vary from ten minutes to 30 minutes depending on your individual case. It can be used as an intensive spot treatment, or as an all over skin treatment.

WHAT SKIN/HEALTH CONDITIONS CAN NOT BE TREATED?

- Herpes simplex
- If you have a pacemaker
- Pregnancy
- Epilepsy
- Excess metallic fillings
- Acute sunburn
- Uncontrolled diabetes
