

Rejuvalight LED Therapy

GET THE FACTS

WHAT IS IT?

This is an anti-ageing, rejuvenating and healing treatment which harnesses the positive effects of both red and blue light, to replenish and repair skin cells either as a standalone procedure, or in combination therapy as an adjunct to peels, microdermabrasion and other facial and hand treatments.

Rejuvalight is a premier performing LED system that delivers red light and blue light wavelengths for the treatment of mild to moderate acne and skin rejuvenation with no downtime.

HOW DOES IT WORK?

The Blue Light wavelengths have proven very effective in treating acne by inhibiting the bacteria (P.acnes) responsible for the inflammation in the skins sebaceous glands. The Red Light wavelength provides effective Light modulation, improving cellular activity and micro vascular circulation, encouraging collagen and elastin production as well as detoxification. The Red and Blue Lights can be used selectively or combined in the treatment process.

REJUVALIGHT RED AND BLUE THERAPY:

- Promotes healthier circulation and oxygenation of your skin
- Softens lines and folds
- Stimulate increased inner skin firmness
- Provides superb skin radiance
- Accelerates skin repair for increased wound healing
- Unites hydrogen and oxygen to create moisture within your skin
- Skin surfaces become more toned and youthful with a healthy glow
- Rejuvenates skin that has sluggish metabolism and slow cellular activity that are showing visible signs of aging
- Promotes collagen and elastin production and stimulates cellular renewal, leading to more youthful skin

DOES THE TREATMENT HURT?

No. This treatment is 100% non-invasive; it creates no heat or trauma to your skin. The treatments are pleasant under a cool light. At the end of a 30 min treatment you might experience a warm glow in your skin. Overall, a relaxing and enjoyable experience!

DO I NEED TO COVER MY EYES DURING TREATMENT?

The lights are very bright; you will be provided with protective eye wear for your own comfort.

CAN REJUVALIGHT BE COMBINED WITH OTHER SKIN THERAPIES?

Absolutely, yes! Rejuvalight LED therapy is used to enhance the effect of other skin treatment modalities such as treatment facials, microdermabrasion, enzyme and acid peels, the Skin Remodeling System and Micro Needling.

What is the recommended treatment plan to achieve best results for Acne treatments?

2-3 sessions in the first 2 weeks, and then at weekly intervals for a 4-5 week period. The Red and Blue Light wavelengths are generally used in a combined program to achieve optimal results for acne treatment. Each session lasts 30 minutes, and your therapist may recommend these treatments combined with peels or microdermabrasion, depending on your skin condition.

HOW SOON WILL I SEE ANTI-AGEING RESULTS WITH REJUVALIGHT RED?

There will be some immediate visible changes in your skin, but most changes occur gradually and naturally over a few weeks. The light stimulates natural cellular processes even after the treatment has stopped. LED is a cumulative treatment rather than an aggressive approach and helps to build a healthy skin, from the inside out. A course of weekly treatments provides best results.

WHAT ARE THE SKIN/HEALTH CONDITIONS THAT CANNOT BE TREATED?

- Epilepsy
- Pregnancy
- If you are taking light-sensitive medications.
